

ChallengAir AirMax (Black or Blue model) (2-speed or Variable speed)

Two motor two speed professional dryer. One motor supercharges the other, or use just one for air volume and temperature versatility. Powerful motors reduce drying time as high velocity air penetrates even the thickest undercoats. "Flow-through" motor/fan systems warms air as it cools the motors for great energy savings. New noise deadening, high impact, service friendly "clamshell" housing is also very service friendly. Includes convenient "twist on" hose along three versatile "twist on" nozzles including Double K' s "Air Sweep" nozzle designed to blow water off in sheets. Dual air filtration protects motors and shop air quality. Molded silicone sound isolating motor mounts results in exceptional quietness.

The variable speed model with its solid-state variable speed control allows versatile temperature, volume and velocity adjustments.
