401 POWER CLIPPER

The Double K POWER CLIPPER is superior to any other clipper and cuts clipping time in half! The Double K POWER CLIPPER cuts easily through thick, matted, dirty or bloody hair while operating very quietly -- in virtual silence at low speeds! Reduces risk of laceration due to ineffective clipper. With five times the power of conventional clippers, the 1/8 horsepower the POWER CLIPPER cuts faster and smoother than any other clipper. The variable speed control offers speed adjustments from 100 to 4500 RPMs. With 9000 blade "strokes per minute" and the greatest range of blade motion in its class, the Power Clipper is unsurpassed in fine clipping capability and surgical prep applications. Its unique cable drive system transfers power from the motor to the handpiece allowing the handpiece itself to remain cool during clipping. The "quick detach" handpiece allows for optional cast cutting, orthopedic drilling & pinning, nail grinding or dental polishing handpieces to be installed on to the power cable for great versatility. The Double K POWER CLIPPER handpiece is impact resistant and accepts all "snap on" style blades. The clipper speed may be turned down to work around delicate

areas in essential silence. This is a very important feature when working with young or inexperienced animals.

The available cable lengths are 5 ft., 7 ft., 10 ft., 12 ft., 15 ft. and 20 ft. (please specify length when ordering). In the event your Double K POWER CLIPPER ever needs service, Double K has authorized service centers located strategically throughout the United States. The Double K POWER CLIPPER has a one-year limited warranty and a three-year motor warranty.

* Optional quick detach handpieces for nail grinding, orthopedic drilling & pinning, cast cutting and dental polishing available.
